[LinkedIn](#) / [GitHub](#) / [Frontend Mentor](#)

A self-learner front-end developer who is proficient in using web languages and technologies to deliver responsive, accessible, and interactive websites/ apps.

EXPERIENCE

Freelancer | Jan 2022 – Now

Coordinated with team partners to finalize designs and develop static and dynamic websites based on customers' requirements.

PROJECTS

Job Listing with Filtering | ReactJS & Express.js

[GitHub Repo](#) – [Live Site](#)

An interactive app which helps companies list their open roles and helps users find jobs easily by filtering them with different tags. Built as a full-stack application by using Function Components, Hooks, CSS Modules, and HTTP Client (Axios) with basic server to fetch the JSON formatted data from. Deployed on Cloud Application Platform (Heroku).

Collection of Different Components

[GitHub Repo](#) – [Live Site](#)

A collection that contains presentational components to preview articles, products, and ideas. As well as interactive components to help users rate, buy products and complete forms.

ROOM Landing Pages

[GitHub Repo](#) – [Live Site](#)

A homepage that is built to represent a decoration company with an optimal layout for any device's screen size using Flexbox and responsive images, a slider that controls the HEADER element to display different kinds of services using JavaScript, and a Navbar to give the user the ability to navigate the website.
